

PACSA Monthly Food Price Barometer: JULY 2015

MEDIA STATEMENT

This Women's Month instead of 'celebrating' women; can we remove the economic burden off their shoulders?

As Women's Month draws to a close, PACSA's July Food Price Barometer picks up on a type of violence oft unspoken: the structural economic violence of poverty and injustice borne by women every day. Following the broom into the workplace, women's work is undervalued. In a context of very low wages, theirs is the lowest paid work. Despite this, women hold families together: children are getting fed and going to school. How they are able to do it on the little money they earn is based on a mix of savviness, ingenious debt management and complex social relationships and organization. This Women's Month can we suspend the 'celebration' and instead remove some of the economic violence?

According to The Labour Research Service (2015)¹ the lowest median minimum wage according to sectoral determinations is in the domestic sector, where workers earn R1 631 per month. The Expanded Public Works Programme which employs the most vulnerable workers, mostly women, provides a wage of R1 819 per month. Farm workers earn R2 420; workers in the hospitality industry earn R2 749 per month; contract cleaners earn R2 810 a month and private security workers R3 037 a month. These sectors, where mostly women are employed, earn less than the industry median wage of R3 600. The gender wage gap between men and women is R900 a month (R3 500 for men vs. R2 600 for women). Many of the women earning low wages support families on these single incomes.

Whatever happens in the broader socio-economy has an impact on women because women take responsibility for families. Job losses, high unemployment levels, low wages, low social grants, high food prices, electricity and transport costs; and increasing costs of educating children are all more heavily borne by women. By right women should not be able to shoulder such excessive levels of burden. But they do. The gap between what women earn and the needs of families is being met. It is however increasingly evident that women are not holding families together on money earned, either through employment, grants or small local 'entrepreneurship.' Women are holding families together through extraordinary savviness in accessing goods and services, through their ingenuity in managing debt and through complex social relationships and organization.

Child Support Grants [CSG] are critical in supporting children. They are excellently targeted and well used. In February 2015 National Treasury raised the CSG by R10, a 3.1% increase from R320 to R330. A few weeks prior to this Statistics South Africa rebased South Africa's poverty lines. The food poverty line (the lowest threshold) was rebased from R321 to R335 (at 2011 figures). In 2014, the food poverty line was estimated at R400 per person per month (Statistics South Africa, 2015). The CSG is less than the food poverty line. The South African Government leading much of the hullabaloo around Women's Day celebrations chose to increase the CSG by R10 this year. Not even enough to buy one extra loaf of bread a month. The PACSA Minimum Nutritional Food Basket for July 2015 tracks the price of food to feed a small child between the ages of 3-9 years a nutritional diet for a month at R480.15; food for a teenage boy costs R609.73. This is just food. Women have to find the means to bridge the food gap, clothe their children, transport them to school and pay for schooling.

When we asked women participating in focus groups on food prices how they are able to feed their children and send them to school when incomes are so low we typically get a lot of laughing and theatrical magic wand waving. "Look," they tell us, "it is no great mystery. We love our children. We will do whatever it takes. The short answer you are looking for is amashonisa (loan sharks). The longer answer is amashonisa and that we are blady clever. They keep telling us we don't know how to spend; we don't know how to save. We need to be educated ... ha! The truth is if any of those economists, those finance people, if those people ever even bothered to come and speak with us. To really listen like you are. They will see that we are the best economists, the best financial managers you have ever seen. Let them come here. Come be us mothers with children and see how they get through even just one day" (Focus Group, Madiba Pietermaritzburg, 24 August 2015).

If nothing else, Women's Month calls us to have a deeper discussion around structural economic violence. Food is a way out of poverty and our economy must be transformed to ensure that mothers are able to feed their children on the monies they are able to secure. Our social security system must be a vehicle to lift people out of poverty and protect people from moving into it. Currently it does neither; and it is women who carry this burden.

	Tomatoes	3kg	↑ R 38.17	↓ R 35.36	↓ R 27.40	-R 7.96	
	Potatoes	10kg	↓ R 33.33	↓ R 30.17	↓ R 29.98	-R 0.18	
Miscellaneous	Salt	1kg	↑ R 11.23	↓ R 11.18	↓ R 11.06	-R 0.12	-R 2.91
	Yeast	4 X 7g pkts	↔ R 11.95	↑ R 12.15	↔ R 12.15	R 0.00	
	Beef stock	240g	↓ R 13.45	↑ R 14.95	↓ R 13.48	-R 1.47	
	Soup	600g	↓ R 20.52	↓ R 20.27	↑ R 20.46	R 0.18	
	Curry powder	200g	↓ R 19.98	↑ R 20.98	↓ R 18.65	-R 2.33	
	Rooibos tea bags	200g	↑ R 15.32	↑ R 15.98	↔ R 15.98	R 0.00	
	Coffee	100g	↔ R 15.40	↔ R 15.40	↔ R 15.40	R 0.00	
	Cremora	1kg	↑ R 37.32	↓ R 36.48	↑ R 37.32	R 0.84	
Monthly cost of PACSA food basket			↑ R 1 670.20	↓ R 1 654.81	↓ R 1 612.83	-R 41.98	

The price of the PACSA food basket decreased by R41.98 or -2.54% from its June price of R1 654.81 to R1 612.83 in July 2015.

What is the PACSA Food Basket?

The PACSA Food Basket is an index for food price inflation. It provides insight into the affordability of food and other essential household requirements for working class households in a context of low wages, social grants and high levels of unemployment.

The PACSA Food Basket tracks the prices of a basket of 36 basic foods which working class poor households, with 7 members, said they buy every month (based on conversations with women). The food basket is not nutritionally complete; it is a reflection of reality - what people are buying. Data is collected on the same day between the 21st and 24th of each month from six different retail stores which service the lower-income market in Pietermaritzburg, KwaZulu-Natal. Women have told us that they base their purchasing decisions on price and whether the quality of the food is not too poor. Women are savvy shoppers and so foods and their prices in each store are selected on this basis. The PACSA Food Basket tracks the foods working class households buy, in the quantities they buy them in and from the supermarkets they buy them from. PACSA has been tracking the price of the basket since 2006. We release our Food Price Barometer monthly and consolidate the data for an annual report to coincide with World Food Day annually on the 16th October.

Total cost per person per day					R 16.01		R 17.37		R 18.38		R 20.32

*Note that AP Weight means As Purchased Weight (dry weight) – the figure is rounded off.

What is the PACSA Minimum Nutritional Food Basket?

The PACSA Food Basket is assessed every 3 years to see if the foods and the quantities of these foods in our basket are still being purchased by women living in working class poor families. Consistent with previous assessments women told us that purchasing patterns change in response to affordability. Last year however we noticed a significantly starker change in purchasing patterns due to much steeper increases in electricity and transport coupled with higher food prices. The foods women identified as being in their trolleys were increasingly limited in their diversity. Some nutritionally-rich foods such as high quality proteins and calcium and vegetables were dropping out of their trolleys altogether or being reduced. Similarly, women told us that they were buying starches in greater volumes and switching to cheaper meats as well as buying more sugar, salts and fats.

July 2015
PACSA Monthly Food Price Barometer

What is the PACSA Minimum Nutritional Food Basket? *(continued)*

Because households are forced to buy foods with poorer nutritional value; the gap between what households are buying and what they would like to and indeed should be buying for basic nutrition is widening. In early 2014 PACSA, in consultation with a Registered Dietician, formulated a Minimum Nutritional Food Basket. The rationale was to keep tracking what households are actually able to afford to buy but not to lose sight of the actual cost of foods required in terms of balanced nutrition, in order to grow and develop properly. The PACSA Minimum Nutritional Food Basket provides data on which we can start talking realistically about adequacies in wages and social grants and ensures that current food expenditure patterns are not conflated with the food expenditure required to secure a nutritional basket of food.

The PACSA Minimum Nutritional Food Basket includes a greater variety of nutritionally-rich foods to provide a family with a basic but nutritionally complete monthly diet. The basket can be amended to respond to families of various sizes, ages and lifestyles through its connection to 4 energy groups. Food price data for the PACSA Minimum Nutritional Food Basket is collected with the PACSA Food Basket and conforms to the same methodology. The full report and methodologies on which the PACSA Minimum Nutritional Food Basket is based is accessible off www.pacsa.org.za.

TABLE 3: Monthly costs of PACSA Minimum Nutritional Food Basket for families of various sizes, ages and life stages for July 2015

Total family size		4	5	7
Number of adults and children in family		2 Adults and 2 Children	3 Adults and 2 Children	3 Adults and 4 Children
Ages and lifestyles of family members	Energy group 1	2 children (3-9 years)	1 child (3-9 years)	2 children (3-9 years)
	Energy group 2	None	1 child (10-13 years) 1 elderly woman	1 child (10-13 years) 1 elderly woman
	Energy group 3	1 very active woman	1 very active woman	1 girl (14-18 years) 1 very active woman
	Energy group 4	1 very active man	1 very active man	1 very active man
Number of members in Energy group 1: 6 500 kJ		2	1	2
Number of members in Energy group 2: 8 500 kJ		0	2	2
Number of members in Energy group 3: 10 500 kJ		1	1	2
Number of members in Energy group 4: 12 000 kJ		1	1	1
Total cost of food to meet basic nutritional requirements per family per month:		R2 121.39	R2 683.31	R3 714.82

TABLE 3 provides an example of how the data in the PACSA Minimum Nutritional Basket can be used. By changing family member variables and linking these variables to the energy groups, it is possible to calculate the monthly costs of a basic but nutritional basket of food for any family.

Data sourced from: Statistics South Africa. Consumer Price Index. <http://www.statssa.gov.za/publications/P0141/P0141July2015.pdf>

Key indicators

The Consumer Price Index (CPI) is a national measure of inflation compiled by STATSSA. It is a measure of average price changes for consumer goods and services. South Africa's CPI is used to measure inflation for macroeconomic analysis and monetary policy and is used as the basis for wage negotiations and adjustments to social grants.

The CPI is constructed on a range of expenditure levels and spending patterns. Because all South African data is skewed by our extreme structural inequality, national measures tend to capture the middle – the middle is not the majority. The CPI approximates the expenditure of households that spend R12 900 a month. Similarly the weighting given to the 12 categories making up the total CPI basket do not capture the reality of the majority of our people. Workers earning low wages spend money on fewer items in the CPI basket and the proportion of money spent on these items is higher e.g. food, transport and electricity account for ± 90% of the expenditure for the majority of Pietermaritzburg low-income households. In the CPI however; food, transport and electricity are weighted at less than 50% of the total basket of household expenditure.

The PACSA Food Price Barometer tracks the expenditure patterns specifically of low-income households. It tracks the foods low-income households actually buy and the supermarkets low-income households buy from. Because our data is specifically focused on working class poor households, it is able to capture the reality of food price inflation for low-income households.

TABLE 4 presents the CPI-headline inflation (the full basket making up the CPI), the CPI-food component (just the food and non-alcoholic beverage category) and the PACSA food price barometer. Comparing CPI with CPI-food is useful because food prices typically drive overall inflation; and wages and social grant increases are often granted on CPI-headline inflation and not CPI-food. This distinction is important because food price inflation is borne highest by low-income households because most household monies are spent on food. Similarly comparing CPI-food with the PACSA food price barometer is useful because our barometer specifically shows the impact of food price inflation for poor working class households. Hence although both indicators will follow similar trends, the PACSA food price barometer provides a starker indication of the immediate reality of food price inflation.

Commodity prices

Most of our food is planted for profits and not for the plate. Analysing food prices is difficult because we need to consider the logic of the market and not a logic which would follow if food was grown for people. Most of the food on supermarket shelves is grown through agro-industrial methods. The crude oil price and exchange rate are key drivers of food prices locally. Our basic staple foods are commodified and speculated upon on international markets. The price of maize meal in our local supermarket tracks international commodity prices e.g. if the price per tonne of USA maize increases then South African farmers may choose to export their harvest to make more profits, so the price of local South African maize increases.

TABLE 5 includes some of the core drivers of food price inflation as well as our core staple foods subject to international commodity speculation.

MINUS Communication and media	R 150.00	R 150.00	R 150.00	R 150.00	R 150.00
MINUS Clothing and footwear	R 416.66	R 416.66	R 416.66	R 416.66	R 416.66
MINUS Domestic & household hygiene items	R 519.76	R 519.76	R 519.76	R 519.76	R 519.76
MINUS Cultural obligations	R 350.00	R 350.00	R 350.00	R 350.00	R 350.00
Monies left over AFTER FOOD & SOME ESSENTIAL HOUSEHOLD REQUIREMENTS secured	R -4 659.68	R -3 707.68	R -2 869.68	R -1 409.68	R 1 930.32

* Please note expenditures in Table above exclude monies for debt repayments, health care, education, rent, emergencies, amongst others.

** Our research in Pietermaritzburg has shown that a household of five needs at least R8 000 a month to afford the expenditures that allow a family to live at a basic level of dignity (see "Household E").

Food price affordability

TABLE 6 shows the impact of low incomes and high food and other essential goods and service costs on the ability of households with different incomes and socio-economic scenarios to secure food. Please refer to Appendix 1 for the justification of income, household size, food indicator, and quantity and value of goods and services presented in the table above. All figures are purposive to present a realistic picture of the socio-economic situation affecting a wide range of low-income households and the costs of goods and services in Pietermaritzburg.

South Africans are net buyers of food. Supermarkets are the main source of food for the majority of households. Food availability is not generally a problem. We have enough food. The problem is food price affordability. We do not have enough money to buy the food we need. Food insecurity therefore has its basis not in agriculture but is caused by economic and political choices.

For households living on low incomes, food expenditure is not the first priority. Households typically prioritise the non-negotiable expenses before food – such as those expenses which incur penalties for non-payment (e.g. household debt repayments) and those that simply have to be paid (e.g. transport to work, electricity and burial insurance). Food is one of the few expenses which households are able to control. To analyse food price affordability we therefore need to consider not only the level of wages and social grants but also the inflation on other non-negotiable goods and services as well as that of food.

TABLE 7: Comparing PACSA Monthly Food Basket with PACSA Monthly Minimum Nutritional Food Basket

PACSA Food Baskets	Cost of Basket for household size of 7
PACSA Monthly Minimum Nutritional Food Basket	R 3 714.82
PACSA Monthly Food Basket	R 1 612.83
Difference between Baskets	R 2 101.99

How affordability affects nutrition

Food is typically one of the few expenses which low-income households are able to control and because of this other non-negotiable expenses take precedent. This is the reason why we tend to see such low expenditure on food. It is not because that expenditure is what households' reasonably need to or wish to spend to secure sufficient quantities of a diverse range of food for adequate nutrition; it is because this is the amount of money households are able to spend on food.

TABLE 7 shows the severity of the impact of food price affordability on household nutrition when comparing the PACSA Food Basket to the PACSA Minimum Nutritional Food Basket. Low-income households are not able to secure sufficient nutritious food to ensure minimum nutrition, health, well-being and productivity.

Appendix 1: Notes and References for Affordability Table 6

Total household income

We have selected 5 total household income scenarios:

- Household A:** R1 410 = 1 old-age pension (National Treasury, 2014. Budget Speech: 13).
- Household B:** R2 362 = the average minimum wage set by the Employment Conditions Commission across sectoral determinations for 2014 was R2362.36.
- Household C:** R3 200 was selected because 60% (98 680) of all Pietermaritzburg households earn between zero and R3200 a month (STATSSA, Census 2011). This total household income figure provides for 1 employed member receiving minimum wages (earning R1200 – R2000 a month), see URL <http://www.mywage.co.za/main/salary/minimum-wages> with the additional income found by unemployed members through alternative and insecure means.
- Household D:** R4 660 is the average monthly consumption expenditure for Black South African Households (STATSSA, 2012).
- Household E:** R8 000 is where we think the national minimum wage should be located if households are to have the possibility of accessing a basic level of dignity.

Burial insurance

This figure of R200 presents basic family burial insurance costs for a low-income household registered with insurance companies which serve the low-income market (2014). Burial insurance has been included as an essential and prioritised expense because interviews with households reveal that burial insurance is typically paid before any other expense and very seldom defaulted as a mechanism to ensure food is secured.

Electricity and water

The **electricity** cost is calculated on 350kWh per month. This is the average consumption for low-income households in Pietermaritzburg. We use the prepaid electricity tariff of R1.45 per kWh because prepaid meters are installed in the homes of low-income households. The 2015/16 rand value is R507.50 per month (excluding transport and time costs of buying tokens). Households on prepaid meters in Pietermaritzburg are excluded from accessing free basic electricity.

The **water** expense is calculated on a fixed monthly charge for a non-metered household. This is a typical scenario for low-income households living in RDP housing in Pietermaritzburg. The 2015/16 charges on an unmetered water supply is R82.45 per month (includes VAT). **The figure in the table (R589.95) is the sum of electricity and water.**

Transport costs

The transport cost is calculated for a household living outside the CBD, given that apartheid geography has not changed and low-income Black African households still live outside the CBD and far from places of work. It is calculated on 1 kombi trip at R11 or R22 return (Pietermaritzburg kombi charges, July 2014).

The R660 is calculated as follows:

20 trips to work [20 X R22 = R440] + 5 trips to town for work/study /shopping/church etc. [5 X R22 = R110] + 1 long distance trip (we use Durban as the destination) [1 X R110].

Education

This figure has been derived from a focus group, it has its basis in the experience of women with children; it provides the possibility for stationery (± R500 per annum); Carlton paper and toilet paper (R50 once or twice a year); School fees (± R250 once or twice a year); School computer access (± R100 a month); contribution to transport costs.

Communication and media

This figure is arbitrary; it provides R150 per household per month – for newspapers, airtime, photocopying etc.

Clothing and footwear

This figure is arbitrary; it provides roughly R1 000 each for each member in a family of five. The annual figure of R5000 is divided by 12 months to give R416.66 per household per month. Note that for children, the R1 000 allocated may cover school clothes and shoes for a year but will exclude other clothes worn at home.

Domestic and household hygiene products

This figure presents the monthly price of personal and domestic hygiene products tracked through PACSA's barometer. This data and the products tracked were reweighted from October 2014.

Personal hygiene products tracked include:

toilet paper [1ply x 20 rolls], bath soap [200g x 6], toothpaste [100ml x 3], sanitary pads [pack of 10 x 2], Vaseline [250ml x 2], face & body cream [big bottle x2], roll-on [normal x 4], spray deodorant [big sprays x2], shoe polish [100ml x1].

Domestic hygiene products tracked include:

dishwashing liquid [750ml x1], washing powder [2kg x1], green bar soap [bars x4], toilet cleaner [750ml x1], kitchen cleaner [750ml x1] and jik [750ml x1].

Cultural obligations

This figure is arbitrary; it provides R350 per month - includes monies for contributions to funerals, weddings, religious and cultural ceremonies, and possible intra and inter family and community financial assistance.

About PACSA

The Pietermaritzburg Agency for Community Social Action (PACSA) is a faith-based social justice and development NGO that has been in operation since 1979. PACSA operates in the uMgungundlovu region of KwaZulu-Natal, South Africa and focusses on socio-economic rights, gender justice, youth development, livelihoods and HIV & Aids. Our work and our practice seek to enhance human dignity. We are convinced that those who carry the brunt of the problem must be a part of the solution – at the heart of PACSA's core strategy is the notion "nothing about us without us."
